PRODUCT DESCRIPTION

The Apollo-ATI is designed for commercial and industrial day-to-day ventilation/ daylighting with an option for inclement weather. When the top flaps are open the Apollo-ATI provides highly efficient, low cost natural ventilation. When the top flaps are closed for weather protection, side dampers automatically open to provide moderate ventilation. The unit is fabricated from aluminum with poly-carbonate top flaps, and ships assembled. The opening can be equipped with a tested life safety guard.
