CoolStream Product Details

STANDARD FEATURES

- Aluminum Construction
- Direct drive variable speed motors
- High efficiency cellulose medium
- Polypropylene tubing
- Roof or wall mounting available.

OPTIONAL FEATURES

- “All Seasons” package is available for roof or wall mount. Draws down warm air from the ceiling in the winter.
- E.C Fan

BENEFITS

- Modular system designed to meet a variety of requirements
- Environmentally friendly
- Superior energy savings vs. conventional A.C., 20-30% of the power consumption.
- Uses minimal electricity and water to run

APPLICATIONS

- | | | |
|-------------------------|-------------------------|-------------------------|
| • Pulp & Paper Industry | • General Manufacturing | • Data Centers |
| • Gypsum Facilities | • Glass Industry | • Exhibition Halls |
| • Warehouse & Storage | • Food & Agriculture | • Transformer Buildings |
| • Plastics Industry | • Breweries | |

PRODUCT DESCRIPTION

The CoolStream is designed for commercial and industrial applications to cool outdoor air 5° to 15° F. below ambient conditions through a natural evaporative cooling process. It is designed for 17,500 CFM.

The units use direct drive variable speed motors to reduce maintenance while increasing efficiency. Each unit is constructed of aluminum to provide light weight and eliminate corrosion. CoolStream units ship factory assembled.

CoolStream is manufactured under license from Colt International Licensing Ltd, United Kingdom
