LightStream Product Details

STANDARD FEATURES

- Aluminum Framework
- Light-permeating polycarbonate panels
- Reliable manual rack
- Operator - Manual or motorized
- Sections easily lock together to form longer runs
- Handles any temperature, commercial to industrial

TESTING and CERTIFICATION

- Airflow performance modeled

MOUNTING

- The LightStream is mounted on the side wall at any elevation

APPLICATIONS

- Warehouses
- Storage Facilities
- General Manufacturing
- Steel Industry
- Aluminum Industry
- Glass Industry
- Power Stations
- Chemical Industry
- Pulp & Paper Industry
- Mine & Processing Industry

PRODUCT DESCRIPTION

The LightStream is designed for everything from commercial to industrial applications. When mounted low it allows cool, fresh air to be drawn into the space, when mounted high, it allows warm air to exhaust. When open it lets in fresh air and natural light. When it is closed it provides ample daylighting through its translucent panels.

An extruded aluminum framework houses light-permeating polycarbonate panels. A reliable manual rack and pinion or motorized operator allows for easy opening and closing, even with long unit runs. Each unit ships in factory assembled sections and is easily locked together in the field to form longer runs.
