

### MODEL AF-CS OVERVIEW

**Model AF-CS** chain-suspended, high velocity fans provide an even stream of air around the work area or warehouse. They effectively distribute air to 100% of the area. This is more desirable than pedestal fans which can only cool a limited area and often get in the way in production or warehouse operations.

The chain suspension installation is the most popular, simple, and low-cost method of installation. These high-velocity fans provide an even stream of air around the work area or building, effectively distributing air to 100% of the area.

- Chain suspended mounting
- Direct drive motor for minimal maintenance.
- Attractive deep spun 14-gauge steel housing.
- Safety guards are 1/2" mesh galvanized steel screen, on both the inlet and exhaust side.
- Motor mounting brackets are designed to fit most standard off-the-shelf motors.
- Power cord furnished on single phase units.
- Fan housing is coated with thermally fused powdered polyurethane black finish.
